Multi Symbol Attach via Magic Number Setup

Attaching the Toolkit to Multiple Symbols Using the Magic Number

XAUUSD, H1 — the toolkit already attached to the first chart

Once the toolkit is installed and attached to one chart, you can attach it to additional symbols of the same type. Each instance of the toolkit should use a **unique Magic Number** so that MetaTrader 4, or 5, can distinguish between the trades managed by each instance.

1. Open another chart

Open the additional symbol you want to use the toolkit on.

For example, if the toolkit is already attached to:

XAUUSD

you can open another symbol offered by your broker, such as:

EURUSD

or another available symbol that uses the same trading instrument.

Navigator > Expert Advisors — the second symbol (EURUSD) opened in a new chart

2. Attach the toolkit to the new chart

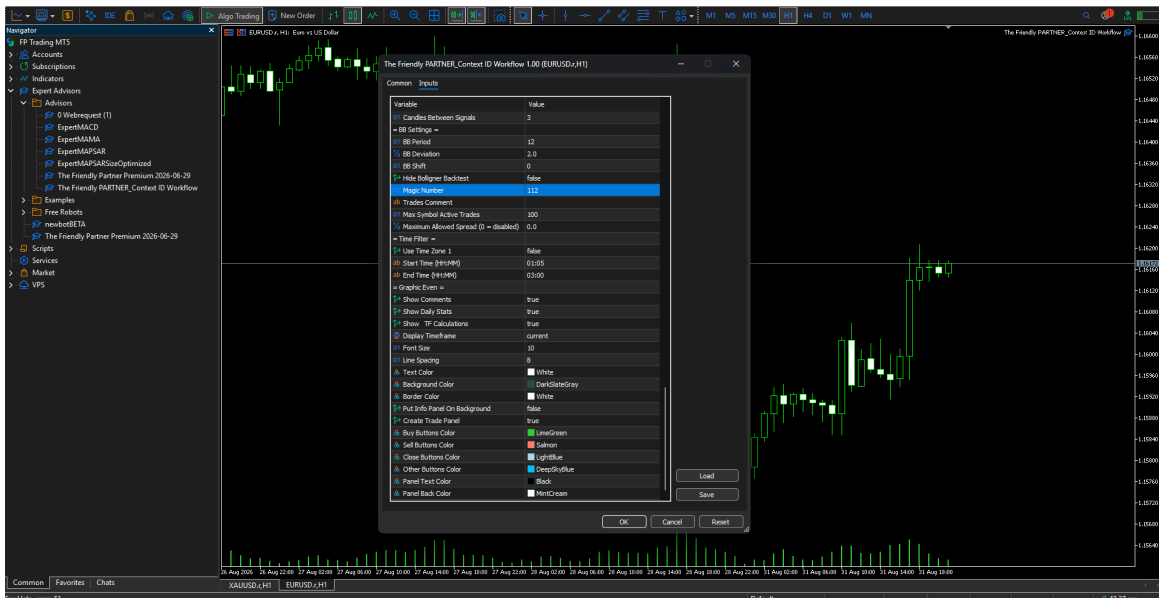

From the **Navigator** → **Expert Advisors** section, drag the same toolkit onto the new chart.

The EA settings window will appear.

3. Set a different Magic Number

Go to the **Inputs** tab and locate:

Magic Number

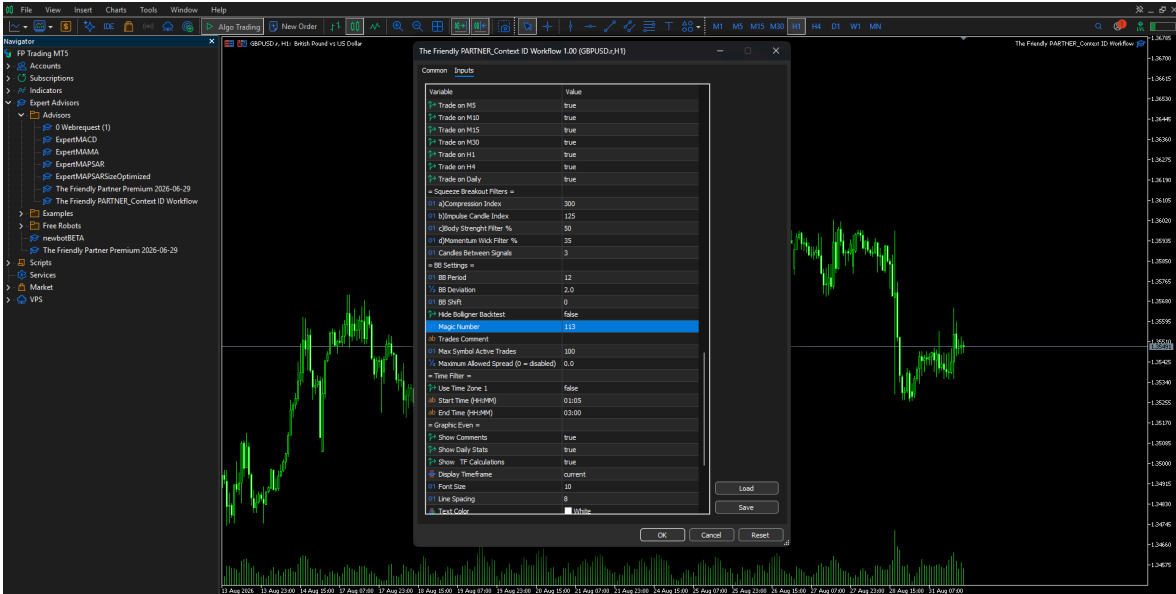

Inputs tab — Magic Number set to 112 for the EURUSD instance

The Magic Number identifies the trades associated with that particular instance of the toolkit.

For example:

Chart	Magic Number
XAUUSD	111
EURUSD	112
GBPUSD	113

GBPUSD instance — Magic Number 113, different from every other chart

The important rule is:

Each instance of the toolkit should have its own unique Magic Number.

Do not use the same Magic Number for multiple independent instances unless the toolkit's documentation specifically instructs you to do so.

4. Confirm the settings

After entering the unique Magic Number, click **OK**.

Make sure **Algo Trading** is enabled in MT5.

Top MT5 toolbar — Algo Trading enabled (red box) while the toolkit runs on the chart

5. Repeat for additional symbols

For every additional symbol:

1. Open the symbol's chart.
2. Drag the toolkit onto the chart.
3. Open the **Inputs** tab.
4. Enter a **unique Magic Number**.
5. Click **OK**.
6. Make sure the toolkit is active on the chart.

For example:

```
XAUUSD
  Toolkit → Magic Number: 111

EURUSD
  Toolkit → Magic Number: 112

GBPUSD
  Toolkit → Magic Number: 113
```

This allows each toolkit instance to identify and manage its own trades separately.

Important: The Magic Number does not make different broker symbols identical. It simply provides a unique identifier for the trades managed by each EA instance.
